

$(1, 1)$

$$f(x) = \frac{1}{x}$$

$$f(x) = \frac{1}{x^2}$$

The figure shows a Cartesian coordinate system with the x-axis and y-axis. A point is marked at $(1, 1)$ on the y-axis. Two curves originate from this point and extend to the right, approaching the x-axis as x increases. The upper curve is labeled $f(x) = \frac{1}{x}$ and the lower curve is labeled $f(x) = \frac{1}{x^2}$. The region between the two curves is shaded in dark gray, and the region under the lower curve is shaded in light gray.
